

Save the Date

April 29 & 30, 2009

Radisson Hotel – Nashua, NH

About the Conference

The use of pellets, wood, energy crops and other forms of renewable biomass are becoming increasingly popular and important as heating energy sources for commercial, industrial, and residential users. Conference organizers will inform and generate lively discussions by bringing together those people who have a stake in and can benefit from an expanding renewable biomass energy industry. Come and take part in a conference that will examine real issues and real solutions such as:

- biomass supplies, including pellets, wood chips and energy crops,
- positioning your business in an emerging renewable energy market
- fuel distribution including bulk delivery,
- technology trends here and abroad,
- community and district energy systems fueled with biomass
- federal and state policies and incentive programs, and
- environmental considerations and climate benefits.

Meet and network with the Northeast's leading equipment manufacturers, pellet and other biomass fuel producers and retailers and participate in open discussions relative to the heating energy needs of industrial, commercial, and residential customers. Vendors will be on hand to show products and services of interest. Hear about advanced installations of renewable biomass energy systems and meet business leaders who are making these forms of energy practical and affordable. Be informed, be inspired and get excited about what renewable biomass energy can do to foster energy independence and improve the environment here in the Northeast.

Who Should Attend

- pellet, woodchip and energy crop fuel producers, and distributors
- pellet and chip boiler, furnace, and residential heating equipment manufacturers, distributors, and retailers
- facility owners (city, county, state, university, hospital), facility managers and engineers interested in options for controlling volatile energy prices,
- farmers and forestland owners, forest land managers, and loggers interested in new opportunities and markets,
- local and state government officials interested in creating local jobs and preserving the environment.
- architects, engineers, consultants, and
- entrepreneurs, investors, manufacturers, and retailers interested renewable energy,
